Development Manual

Coding rules:

Functions & Variables should have descriptive names

Tab indents should be used

Constant variables are always declared in capital letters

```
public static final int MAX = 20;
```

Curly braces should come after a declaration of a function or a loop and not in the same line(example below):

```
void Function()
{
    for(int i = 0;i < 1; i++)
    {
        ...
    }
}
```

Snake Casing should be used when declaring variables and functions(example below):

```
void snake_casing_function()
{
    int snaake_casing = 0;
    if(check_for_winner != snake_casing)
    {
        return true;
    }
}
```

Built-in Java functions are exempt from Snake Casing
